DDL Commands with Constraints – PRIMARY, FOREIGN KEY, UNIQUE, CHECK

AIM: To add the constraints like primary key, foreign key, unique key and check using DDL commands.

Description:

PROCEDURE:

Step 1: Create the **Movies** table with the required attributes.

Step 2: Add **PRIMARY KEY** constraint on the **M_id** column.

Step 3: Add a **UNIQUE** constraint on the **Ott** column.

Step 4: Verify the table structure and insert movie records.

Step 5: Attempt to update the OTT value of movie **M_id = 103** to **Netflix**.

Step 6: Observe that MySQL displays a duplicate entry error because the **UNIQUE** constraint prevents duplicate values.

Step 7: Drop the **UNIQUE** index created on the **Ott** column.

Step 8: Modify the **Ott** column to ensure it remains **NOT NULL**.

Step 9: Update the OTT value of **M_id = 103** to **Netflix** again.

Step 10: Display all records to verify that duplicate OTT values are now allowed after removing the **UNIQUE** constraint.

Query 1:

```
ALTER TABLE movies ADD PRIMARY KEY (M_id);
```

OUTPUT 1 :

```
mysql> ALTER TABLE movies ADD PRIMARY KEY (M_id);  
Query OK, 0 rows affected (0.18 sec)  
Records: 0  Duplicates: 0  Warnings: 0
```

Query 2 :

ALTER TABLE movies MODIFY Ott VARCHAR(15) NOT NULL;

Output 2 :

```
mysql> ALTER TABLE movies MODIFY Ott VARCHAR(15) NOT NULL;  
Query OK, 0 rows affected (0.13 sec)  
Records: 0 Duplicates: 0 Warnings: 0
```

Query 3 :

ALTER TABLE movies ADD UNIQUE (Ott);

Output 3 :

```
mysql> ALTER TABLE movies ADD UNIQUE (Ott);  
Query OK, 0 rows affected (0.09 sec)  
Records: 0 Duplicates: 0 Warnings: 0
```

Query 4 :

ALTER TABLE movies ADD CONSTRAINT chk_mid CHECK (M_id >= 2);

Output 4 :

```
mysql> ALTER TABLE movies ADD CONSTRAINT chk_mid CHECK (M_id >= 2);  
Query OK, 4 rows affected (0.18 sec)  
Records: 4 Duplicates: 0 Warnings: 0
```
